The Tulsa Townies Program Installs Updated Bicycle Access Stations at River Parks

This summer, the popular Tulsa Townies automated bicycle sharing program will feature three newly upgraded bicycle access stations at their current locations along Tulsa's River Parks. These access stations are located along Riverside Drive at 19th, 41st and 96th Streets. Installation of the new system is scheduled to begin in late June or early July.

Founded in 2007 by Saint Francis Health System and Tulsa Townies, LLC, the Tulsa Townies program provides rental stations for its distinctive pink bicycles for River Parks visitors ages 18 years or older. With a \$10 credit card deposit, use of the Tulsa Townies is free as long as the bicycles are returned within 24-hours. The improved automated rental stations will be camera-monitored, solar powered and will also include new radio frequency identification (RFID) recognition technology. The maintenance regimen will also be upgraded.

"River Parks is a great place to have fun, exercise and enjoy the Tulsa area and the Townies give local visitors another amenity to enjoy along River Parks. We just want to make it easier to enjoy this amenity," said Tom Cooper, a member of Tulsa Townies, LLC. "We expect that the new bicycle rental and locking system will be much easier to use." River Parks Executive Director Matt Meyer added, "The Townies program is a way for people to engage in an active lifestyle which River Parks encourages. With these improvements, we anticipate an increase in the number of riders."

(continued)

The new technology updates will also allow users of the Tulsa Townies the ability to visit the website www.tulsa-townies.com from any handheld or personal computer and find real time availability of the bicycles.

“Providing an improved service to the users of the Tulsa Townies is important to us”, Cooper said. “Even though we’ve had almost 30,000 users since inception, there has been room for improvement.”

The technology for the update is provided by SandVault Group of Vancouver, British Columbia and the specialized bikes are from Workman of New York City. The technology is similar to that used successfully on a large scale in Miami Beach, Florida (www.decobike.com) as well as in Golden, British Columbia. “Tulsa has really been a trendsetter”, said Rick Murray, President of SandVault. “The original Tulsa Townies program in the River Parks was the first fully automated bike share system in North America. It was also the first bike share anywhere to use solar power and GPRS communication to allow freedom of location. At SandVault we are delighted to have this opportunity to keep the Tulsa Townies program at the leading edge of bike share technology”, he said.
